Editorial

You are given an unrooted tree of n nodes numbered from 1 to n . Each node i has a color, c_i .

Let $d(i, j)$ be the number of different colors in the path between node i and node j . For each node i , calculate the value of sum_i , defined as follows:

$$sum_i = \sum_{j=1}^n d(i, j)$$

Your task is to print the value of sum_i for each node $1 \leq i \leq n$.

Input Format

The first line contains a single integer, n , denoting the number of nodes.

The second line contains n space-separated integers, c_1, c_2, \dots, c_n , where each c_i describes the color of node i .

Each of the $n - 1$ subsequent lines contains 2 space-separated integers, a and b , defining an undirected edge between nodes a and b .

Constraints

- $1 \leq n \leq 10^5$
- $1 \leq c_i \leq 10^5$

Output Format

Print n lines, where the i^{th} line contains a single integer denoting sum_i .

Sample Input

```
5
1 2 3 2 3
1 2
2 3
2 4
1 5
```

Sample Output

```
10
9
11
9
12
```

Explanation

The *Sample Input* defines the following tree:

Each sum_i is calculated as follows:

$$1. sum_1 = d(1, 1) + d(1, 2) + d(1, 3) + d(1, 4) + d(1, 5) = 1 + 2 + 3 + 2 + 2 = 10$$

$$2. sum_2 = d(2, 1) + d(2, 2) + d(2, 3) + d(2, 4) + d(2, 5) = 2 + 1 + 2 + 1 + 3 = 9$$

$$3. sum_3 = d(3, 1) + d(3, 2) + d(3, 3) + d(3, 4) + d(3, 5) = 3 + 2 + 1 + 2 + 3 = 11$$

$$4. sum_4 = d(4, 1) + d(4, 2) + d(4, 3) + d(4, 4) + d(4, 5) = 2 + 1 + 2 + 1 + 3 = 9$$

$$5. sum_5 = d(5, 1) + d(5, 2) + d(5, 3) + d(5, 4) + d(5, 5) = 2 + 3 + 3 + 3 + 1 = 12$$
