Editorial

This challenge is part of a tutorial track by [MyCodeSchool](#) and is accompanied by a video lesson.

You're given the pointer to the head node of a linked list and an integer to add to the list. Create a new node with the given integer, insert this node at the head of the linked list and return the new head node. The head pointer given may be null meaning that the initial list is empty.

## Input Format

You have to complete the `Node* Insert(Node* head, int data)` method which takes two arguments - the head of the linked list and the integer to insert. You should NOT read any input from stdin/console.

## Output Format

Insert the new node at the head and return the head of the updated linked list. Do NOT print anything to stdout/console.

## Sample Input

```
NULL , data = 1
1 --> NULL , data = 2
```

## Sample Output

```
1 --> NULL
2 --> 1 --> NULL
```

## Explanation

1. We have an empty list, on inserting 1, 1 becomes new head.
2. We have a list with 1 as head, on inserting 2, 2 becomes the new head.

C++

```
1 /*
2  Insert Node at the beginning of a linked list
3  Initially head pointer argument could be NULL for empty list
```

```
4  Node is defined as
5  struct Node
6  {
7      int data;
8      struct Node *next;
9  }
10 return back the pointer to the head of the linked list in the below method.
11 */
12 Node* Insert(Node *head,int data)
13 {
14     // Complete this method
15 }
16
```
