A pair of nodes, (a, b) , is a *similar pair* if both of the following conditions are true:

1. Node a is the ancestor of node b
2. $abs(a - b) \leq k$

Given a tree where each node is labeled from 1 to n , can you find the number of similar pairs in the tree?

Input Format

The first line contains two space-separated integers, n (the number of nodes) and k (the similar pair qualifier), respectively.

Each line i of the $n - 1$ subsequent lines contains two space-separated integers defining an edge connecting nodes p_i and c_i , where node p_i is a parent to node c_i .

Constraints

- $1 \leq n \leq 10^5$
- $0 \leq k \leq n$
- $1 \leq p_i, c_i \leq n$

Output Format

Print a single integer denoting the number of similar pairs in the tree.

Sample Input

```
5 2
3 2
3 1
1 4
1 5
```

Sample Output

```
4
```

Explanation

The similar pairs are $(3, 2)$, $(3, 1)$, $(3, 4)$, and $(3, 5)$, so we print 4 as our answer. Observe that $(1, 4)$ and $(1, 5)$ are *not* similar pairs because they do not satisfy $abs(a - b) \leq k$.
