Reverse a doubly linked list 🔖

by harsha_s

| Problem | Submissions | Leaderboard | Discussions | Editorial 🔒 |

This challenge is part of a tutorial track by MyCodeSchool

You're given the pointer to the head node of a doubly linked list. Reverse the order of the nodes in the list. The head node might be NULL to indicate that the list is empty.

Input Format

You have to complete the `Node* Reverse(Node* head)` method which takes one argument - the head of the doubly linked list. You should NOT read any input from stdin/console.

Output Format

Change the `next` and `prev` pointers of all the nodes so that the direction of the list is reversed. Then `return` the head node of the reversed list. Do NOT print anything to stdout/console.

Sample Input

```
NULL
NULL <-- 2 <--> 4 <--> 6 --> NULL
```

Sample Output

```
NULL
NULL <-- 6 <--> 4 <--> 2 --> NULL
```

Explanation

1. Empty list, so nothing to do.
2. 2,4,6 become 6,4,2 o reversing in the given doubly linked list.
